Priority

Applicant has not complied with one or more conditions for receiving the benefit of an earlier filing date under 35 U.S.C. 119(e) or 120 as follows:

This application is claiming the benefit of a prior filed nonprovisional application under 35 U.S.C. 120, 121, or 365(c). Copendency between the current application and the prior application is required.

The second application must be an application for a patent for an invention which is also disclosed in the first application (the parent or provisional application); the disclosure of the invention in the parent application and in the second application must be sufficient to comply with the requirements of the first paragraph of 35 U.S.C. 112. See *Transco Products, Inc. v. Performance Contracting, Inc.*, 38 F.3d 551, 32 USPQ 2d 1077 (Fed. Cir. 1994).

Claim Rejections - 35 USC § 102

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) do not apply to the examination of this application as the application being examined was not (1) filed on or after November 29, 2000, or (2) voluntarily

Art Unit: 3738

published under 35 U.S.C. 122(b). Therefore, this application is examined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

Claims 1-5 are rejected under 35 U.S.C. 102(b) as being anticipated by Brickman (3,161,200). Brickman discloses a breast prosthesis 40, 80 having hook material 42, 44 (see figure 6) positioned on the front surface. The hook material is configured to engage loop material 76, 77 positioned in a bust cup 30 for releasable attachment.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 6-14 are rejected under 35 U.S.C. 103(a) as being unpatentable over Brickman (3,161,200) in view of Eberl et al (4,681,587).

Brickman teaches a breast prosthesis and bust cup system as described above. However, Brickman is silent in regards hook-and-loop fastener material on the rear surface of the breast prosthesis for attachment of a comfort pad. Eberl et al teaches detachably coupling a comfort pad (3b and 4) to a breast prosthesis 1 utilizing hook-and-loop fasteners 7. It would have been obvious to one having ordinary skill in the art to have utilized the comfort pad attached by hook-and-loop fasteners to the rear surface

Art Unit: 3738

of the breast prosthesis as taught by Eberl et al with the prosthesis of Brickman for increased comfort which can be easily removed for washing (see column 2, lines 1-2).

Referring to figure 3, some of the fasteners 7 are positioned along the periphery of the prosthesis.

Eberl et al teaches the fasteners are "strips" and therefore have a length greater than the width. Also, Brickman teaches length greater than width.

Eberl et al is silent whether the hook or loop portion of the fastener is attached to the rear of the prosthesis. It would have been an obvious reversal of parts to have either and would have been obvious to one having ordinary skill in the art. Note that Brickman teaches the hook portion position on the prosthesis.
